DIGGING INTO TRENCH

An increased focus on stormwater management has led to a growing need for and use of trench drain systems. If you are designing such a system, choosing the proper drain type, components and materials is critical to meeting your project goals.

Our course was created to help you do just that. Upon completion, you'll have a real-world understanding of all the variables at play and how to apply best practices. Topics include:

- trench drain types and materials
- slope considerations
- ADA compliance
- flow rates
- load ratings
- fastening systems
- grate materials and design
- mitigating corrosion
- radiused trench design

"Digging Into Trench" can be delivered in-person or via webinar. [Contact](#) your local Iron Age sales rep to schedule a time that works for you.

If on-demand CEU works better for your schedule, feel free to take our course online 24/7 at <http://aecdaily/ironagedesigns>.
